## Bisset Creeping Bluegrass

*Bothriochloa insculpta*

This late flowering, longer season creeping bluegrass was developed by the Queensland Department of Primary Industries and is marketed by Selected Seeds.

It was selected for its ability to persist on a range of soil types in areas with an average annual rainfall of 600 - 1200mm.

- \* Palatable, nutritious leafy feed for grazing or hay production
- \* Late flowering for a full season of feed
- \* Drought tolerant and persistent even on low fertility soil
- \* Easy to establish, covers bare ground quickly with creeping stolons
- \* Withstands heavy grazing and fire.

- \* Bisset Creeping Bluegrass
- \* Medway
- \* Finecut Rhodes Grass
- \* Topcut Rhodes Grass
- \* Aztec Siratro
- \* Dawson Creeping Lawngrass
- \* Riel Forage Oats
